

CareerLens AI

Smart Resume Intelligence System

AI-Powered Resume Analysis & Career Guidance

Name: Priti Darshini Biswal
Course: B.Tech CSE
College: Gurugram University

The Problem with Traditional Resumes

- Users don't know suitable job roles
- Lack of skill gap awareness
- Resumes are not ATS-friendly
- No intelligent guidance system

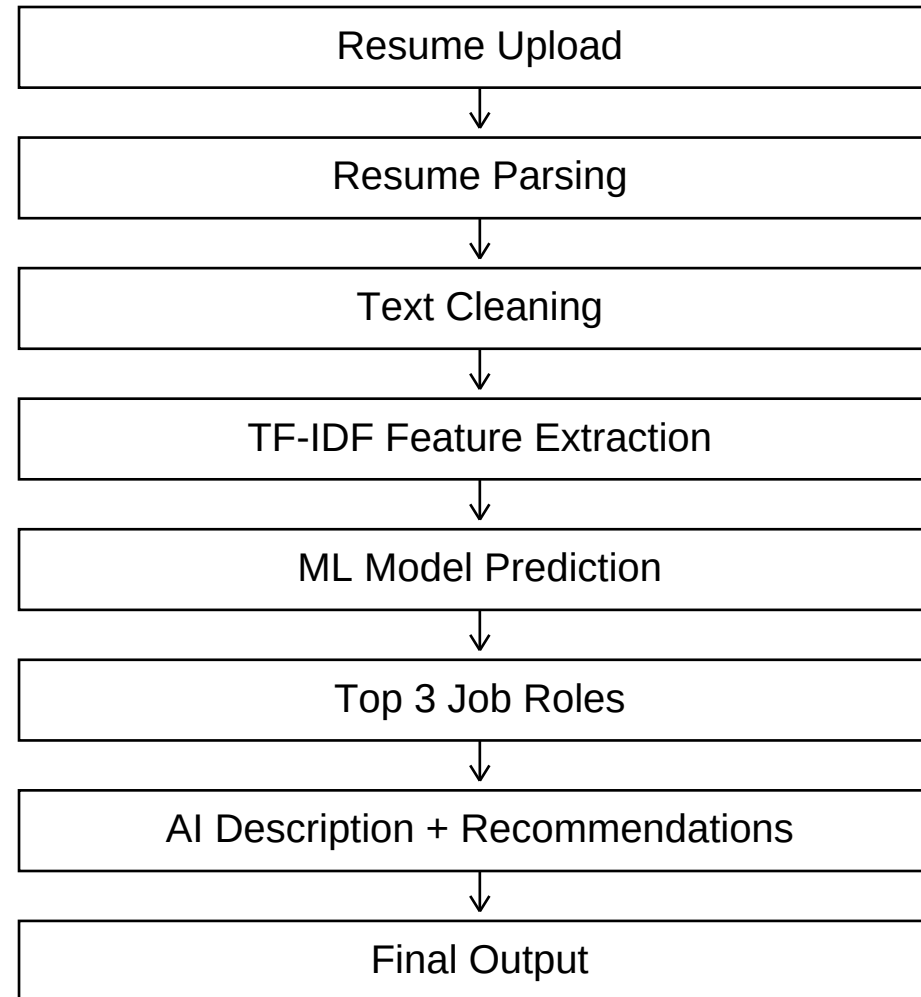

Example: A student with Python, SQL, and project experience may not know whether to target Data Analyst, Python Developer, or Testing roles.

Introducing CareerLens AI

- Upload Resume (PDF)
- Predict Top 3 Job Roles
- Generate AI-based description
- Skill gap analysis
- Resume scoring and recommendations

Insert Screenshot:
Application Home

System Workflow

Core ML Model

- Algorithm: Support Vector Machine (SVC)
- Feature Extraction: TF-IDF
- Dataset: Resume dataset
- Output: Top 3 predicted job roles

Input → Resume text
Output → Data Scientist, Analyst, Python Developer

AI-Powered Intelligence

- Resume description generation
- Chatbot-based interaction
- Smart career insights
